

NKUNet

Inception Phase

Presentation

I5S:

Clint Gross
Doug Bruening
Hunter Oka
Robert Riggs

Our Process

- Identify all the requirements for a fully functional system.
- Need to be judicious about what we can reasonably include.
- Track any open questions as “Open Issues” in the Use Cases.
(Keep things moving and don’t get bogged down in the minutia.)
- Keep an eye out for what will become Objects in the implementation.
(Although not technically part of Inception, iterations will be short and we need to start thinking in that direction.)

What is a “USER”?

*Primary user,
in this case “Student” and “Faculty”.*

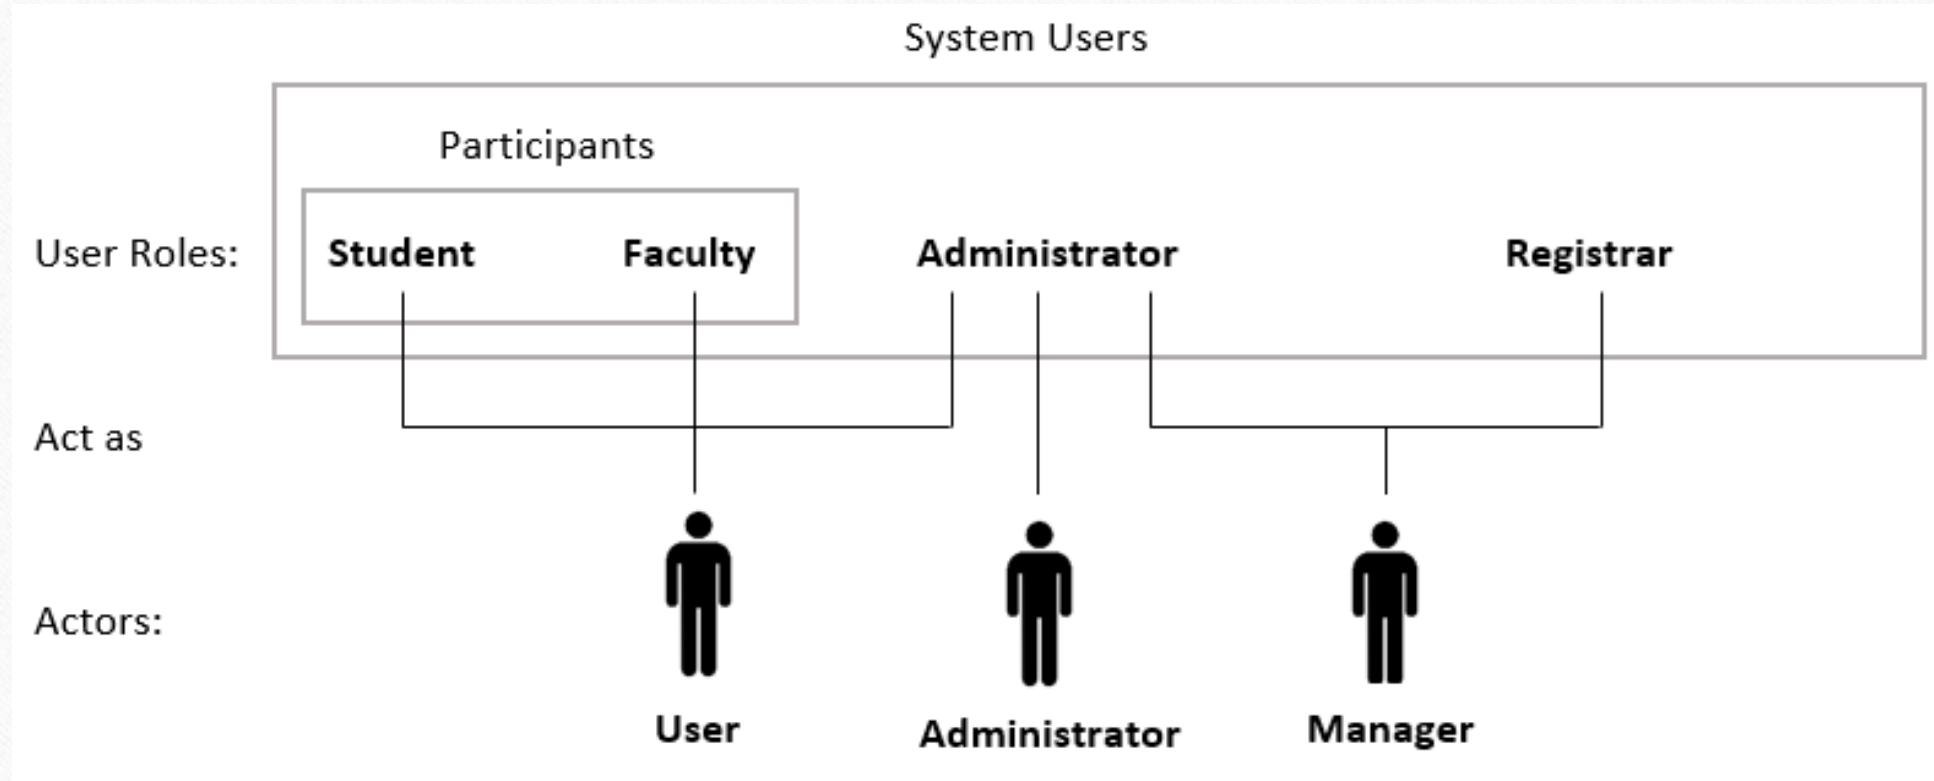

*An Administrator can do everything
a “Student” or “Faculty” can do.
They are also a “User”.*

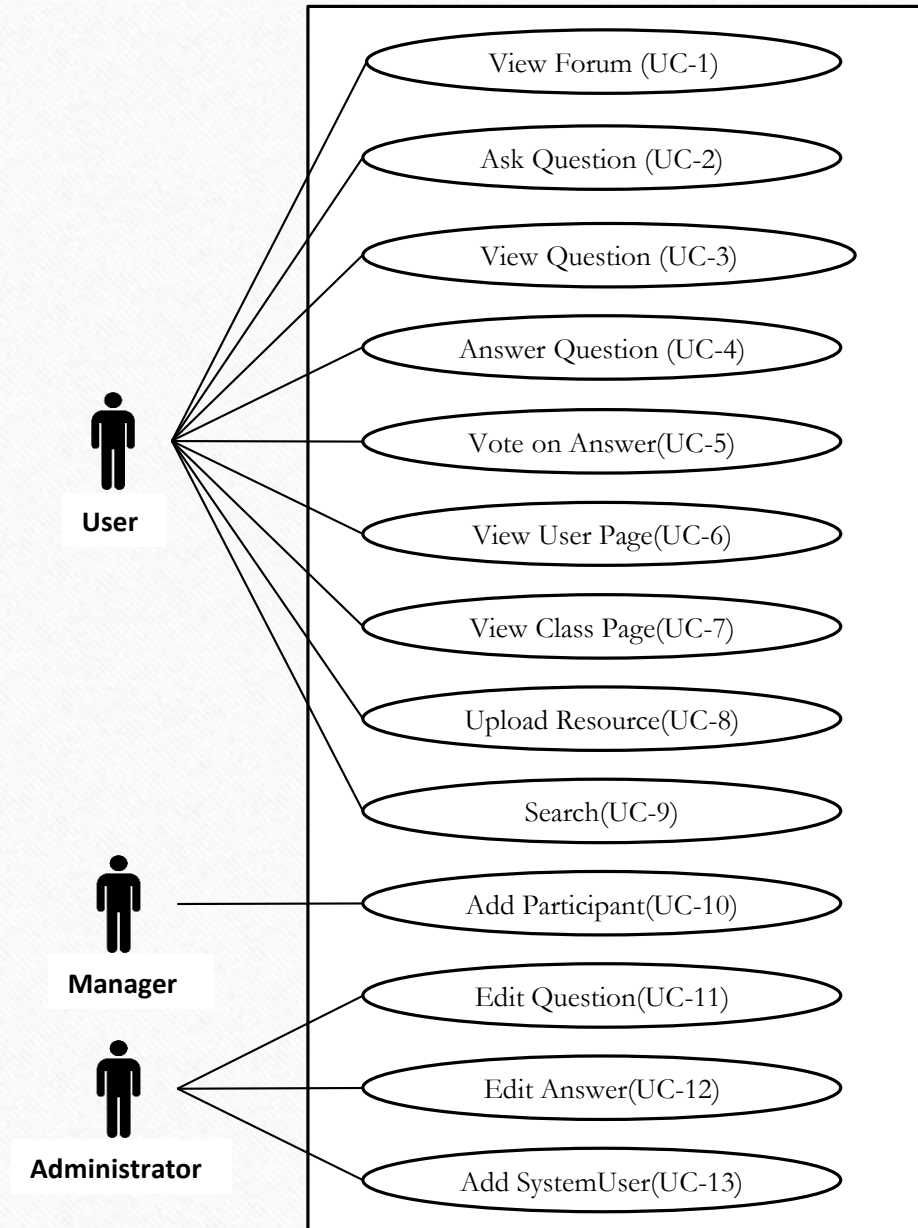

*Whoever performs support functions,
a “Super-User”.*

Any user of the system.

CONFLICTS

Obviously, there *weren't* any! 😊

Well, maybe...

~~CONFLICTS~~ **Lively Discussions**

- “User” term is overloaded,
which led to discussion over appropriate terminology
- Grammar (Oxford comma or not?)
- Consistent verbiage
 - Terse
 - Third person, present tense
 - Actor – verb pair
 - Active voice
